

HAMZA EL HADDAD SABRI

Cybersecurity Engineering Student — Penetration Testing | Network Defense | Threat Intelligence

Manresa, Barcelona, Spain | +34 632 290 480 | hamzaelhaddadsabri@gmail.com
linkedin.com/in/hamzaelhaddadsabri | github.com/H4zz0 | h4zz0.github.io

PROFESSIONAL SUMMARY

Cybersecurity Engineering student at ENTI - University of Barcelona with hands-on experience across the full offensive and defensive security lifecycle: reconnaissance and OSINT, vulnerability assessment and CVE exploitation, intrusion detection and prevention with Suricata IDS/IPS, SIEM event correlation, malware analysis, digital forensics fundamentals and cloud security on AWS and Azure. Builder of open-source security tools, including a unified penetration testing platform (ShadowScan) and a MITRE ATT&CK lateral movement simulator (RedTrace). Active TryHackMe practitioner, currently preparing the eJPT certification. Advanced English (C1).

TECHNICAL SKILLS

Penetration Testing: Reconnaissance, OSINT, Nmap, Nessus, OpenVAS, Metasploit, Burp Suite, CVE research and exploitation, privilege escalation, lateral movement

Defensive Security: Suricata IDS/IPS (rule writing and tuning), Snort, SIEM, log analysis, event correlation, incident response, system hardening

Network Security: Firewalls (stateful and application-layer), DMZ architectures, VLAN segmentation, ACLs, VPN (IPsec, IKE), ZTNA, SASE, SD-WAN, DoS/DDoS mitigation, ARP spoofing detection, wireless security (WPA2/WPA3)

Traffic Analysis: Wireshark, tcpdump, Scapy, hping3, PCAP analysis

Malware Analysis: Static and dynamic analysis, sandboxing, malware typology, obfuscation techniques

Cryptography: AES, RSA, PKI, digital signatures, hash functions, key management, GPU-accelerated password cracking

Cloud Security: AWS, Azure, IAM policies, security groups, cloud hardening, S3 security

GRC and Compliance: ISO 27001, ENS, GDPR, NIST, risk analysis and management, threat modeling, security auditing

Threat Intelligence: Cyber threat intelligence (CTI), threat hunting, MITRE ATT&CK framework

Secure Development: Secure SDLC, secure web development, SQL injection prevention, database security

Programming: Python, C/C++, Bash, Go, Java, SQL, JavaScript

Operating Systems: Kali Linux, Debian, Arch Linux, Windows, Bash and Python automation

SECURITY PROJECTS

ShadowScan — Unified Penetration Testing Platform | Python | github.com/H4zz0/ShadowScan

- Built a GUI-based penetration testing platform consolidating port scanning, service fingerprinting and vulnerability discovery into a single professional application.
- Generates structured, exportable reports, enabling repeatable and efficient network security audits.

RedTrace — Lateral Movement Attack Simulator | Python, MITRE ATT&CK | github.com/H4zz0/RedTrace

- Models enterprise networks as weighted graphs to compute optimal attack paths between hosts, supporting red team exercises and internal security posture evaluation.
- Replicates real-world MITRE ATT&CK TTPs: privilege escalation, network segmentation bypass and multi-hop pivoting.

Password Cracking Engine — GPU-Accelerated Cryptanalysis | C, CUDA | github.com/H4zz0/Parallel-Programming-C

- Developed a GPU-accelerated brute-force password cracking engine demonstrating applied cryptanalysis and password policy risk assessment.

RainbowWarriors — Secure Password Manager | Python, AES | github.com/H4zz0/RainbowWarriors

- Implemented AES encryption with secure key derivation, master key protection, integrity validation and secure in-memory credential handling (defense in depth).

Cybersecurity Labs — Applied Security Portfolio | Python, C, SQL | github.com/H4zz0/Cybersecurity-Year-Recap-2024-2025

- Hands-on laboratory work covering malware analysis, secure network design, database security and system administration.

PROFESSIONAL EXPERIENCE

Computer Science Instructor — Pensactius, Manresa (Spain) **Sep 2021 - Sep 2022**

- Delivered theoretical and practical training in computer fundamentals, LAN configuration and security best practices to student groups.
- Provided Level 1 technical support and managed classroom IT infrastructure: user account administration, network setup and system maintenance.
- Developed custom instructional materials and resolved hardware and software incidents under time pressure.

EDUCATION

BSc in Cybersecurity Engineering — ENTI, University of Barcelona **Sep 2024 - Present**

Relevant coursework: ethical hacking, malware analysis, cryptography, network security (firewalls, IDS/IPS, VPN), digital forensics, threat intelligence, risk analysis and management, governance and compliance, cloud security, secure programming (SDLC), AI applied to cybersecurity.

BSc in Telematics Engineering (first year) — Pompeu Fabra University, Barcelona **Sep 2023 - Jul 2024**

Foundation in TCP/IP, OSI model, signal theory and network architecture design.

CERTIFICATIONS AND TRAINING

- eJPT (Junior Penetration Tester), INE Security - in preparation, expected 2026.
- TryHackMe - continuous hands-on practice: security labs, challenges and CTFs.
- Python for Data Science, Udemy (2022).

LANGUAGES

Spanish (native) | Catalan (native) | Arabic (native) | English (C1 Advanced)
